Graduate Consortium for Studies in Microbial Sciences at Harvard

We offer a new opportunity for students interested in graduate studies in microbial sciences at Harvard. This consortium fosters a University-wide community of students who, through their participation in Microbial Sciences Initiative activities and courses, become well versed in the many and diverse disciplines that are advancing our understanding of microbial systems.

The interdisciplinary course “A Microbial World”, taught spring semester, is the cornerstone of consortium studies. There are also “full-immersion” microbial sciences sessions designed for consortium students and offered during Harvard’s new January session. In addition, students attend Friday breakfast chalktalks, monthly seminars, a summer journal club and an annual symposium. Many elective courses covering various aspects of microbial sciences are offered across the University. The consortium is open to Ph.D or D.Sc. students at Harvard who have completed at least one semester in their home department, school or program.
